

COPD Medications No Longer Enough?

Do you stop to catch your breath often, even with taking your medication as directed?

Treatment with the Zephyr[®] Valve may help you get back to living life on your terms without the risks of major surgery.¹

Breathe easier, do more and enjoy a better quality of life.¹
Ask your doctor about the Zephyr Valve.

Brief Statement: The Pulmonx Zephyr[®] Endobronchial Valves are implantable bronchial valves indicated for the bronchoscopic treatment of adult patients with hyperinflation associated with severe emphysema in regions of the lung that have little to no collateral ventilation. Complications of treatment can include but are not limited to pneumothorax (tear in the lung), worsening of COPD symptoms, hemoptysis, pneumonia, and, in rare cases, death. The Zephyr Valve is contraindicated in patients who have not quit smoking or are allergic to Nitinol (nickel-titanium). Please talk with your physician about other contraindications, warnings, precautions, and adverse events. Only a trained physician can decide whether a particular patient is an appropriate candidate for treatment with the Zephyr Valve.
